RELIABLE AND LONG-LASTING

FNM® 4-cylinder 30HPE engine is conceived according best-seller FIC platform requirements. The engine uses a common-rail fuel injection system controlled by an electronic control unit developed in house, especially made for it. The result is a high power-to-displacement ratio unit.

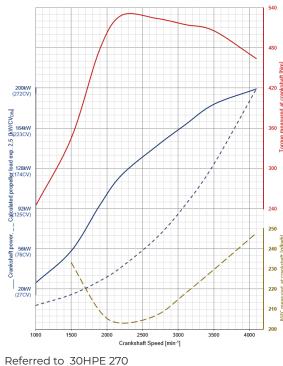

HIGH LEVEL PERFORMANCES

Set either for recreational use, where the engine reaches up to 184kW (250HP), or for any commercial purpose, where it can achieve up to 3000h/year, this unit guarantees excellent performances at each kind of operating condition.

ECU DEVELOPED IN HOUSE

The engine electronic control unit (ECU) has been conceived after a 10-year development project carried out by R&D team; it is especially designed for HPE marine engines application. The ECU controls common rail system parts and included unique control stategies which can be personalized according customers' request. It guarantees excellent performances with limited emissions.
